Hello everyone,

When I went to Google Earth I found the same picture of the standing water at the Arlington Egg Ranch. I compared it to a facility drawing that I got from a public records request and marked its location. See the attachment. Because of the vegetation, I guessing that this is a storm water collection point, but it does not look like a constructed retention basin. Also when you look at the color of the process water ponds and the white material (you have to go to Google Earth to see it) and compare it to the water water in the picture - it looks like process water from the ponds have been put into this area.

There's also areas closer to the ponds that have the same greenish color and white material and you can see a pump at the NE end of the pond closet to the hen houses. These type of pumps are used to fill water trucks. The pond is almost dry and the white material is probably concentrated salts from the evaporation of the water.

Dan

Genell, it appears to be standing water, but I don't know when it was

taken or the exact location on the Arlington property. This was sent to me by Raul Tijerina, and he can be contacted at e-mail.

tijerina372@gmail.com He asked me to forward it to you, so I'm not much help. I have added his name to this 'forward' to ease your contact attempt.

So this is a drainage ditch? Is that standing water in it? It appears to have high eutrophication levels.

Hello all

I am forwarding a pix from Raul (who lives across the street from the Tonopah facility). It was taken at the Arlington plant, I believe along their southern border. Maybe it will be helpful

I was thinking you could send Genell Pridgen this photo. Remember a lot of this waste water ended up on Southern Pacific's property and drainage ditch that ends up draining into the Hassayampa River when there is a rain event. Source was Google map. Raul.

Hello everyone,
